

One login. One source of truth. An AI chief of staff who has every desk composed by 7:10 a.m.

MAVYN runs the whole mortgage branch from one system — pipeline, leads, coaching, recruiting, and the branch P&L — with **MAVIS**, an AI chief of staff, watching all of it around the clock. Built and battle-tested inside a producing branch, not a demo lab: the founder's own team runs on it every morning.

WHAT YOUR BRANCH GETS

- **Mornings, composed.** Every seat opens to its one most important task — with the reason spelled out — plus the week's closings and the floor at a glance.
- **Your funded book, working again.** Refi Radar re-prices every funded loan against the market weekly and ranks the past clients worth a call.
- **Coaching on autopilot.** When a loan officer drifts off pace, the 1:1 is suggested, booked, and prepped before the meeting exists.
- **Speed-to-lead you can prove.** Every lead is logged and scored on arrival, 24/7; every claim is stamped in minutes, so response time becomes a coached number.
- **A real P&L.** Owner-only branch economics on every single file — forecast forward, reconciled monthly against the statements.
- **Talk to it like a person.** "Chase the appraisal on the Furlong file Friday" — MAVIS reads who, when, priority, and the loan it belongs to. Works over SMS too.

BUILT LIKE IT HANDLES MONEY

- **Access enforced at the database row level** — financials render for the owner's seat only; every seat sees exactly its lane.
- **Clients never hear a robot.** Anything client-facing is a draft until a human taps send; internal operations run themselves.
- **Your book stays yours.** Encrypted in transit and at rest, exportable in one tap, never used to train anything.

HOW IT STARTS

- 1 **Show us your shop.** A short call about your branches, volume, and what's slowing you down.
- 2 **We stand it up in days.** Roster, pipeline, and targets come in from the exports you already have.
- 3 **Mornings change.** Your team logs in to a composed desk; you log in to the whole company.
